Maximum Marks	4 marks

Empathy Map Canvas:
An empathy map is a simple, easy-to-digest visual that captures knowledge about a user's behaviors and attitudes.
It is a useful tool to help teams better understand their users.
Creating an effective solution requires understanding the true problem and the person who is experiencing it. The exercise of creating the map helps participants consider things from the user's perspective along with his or her goals and challenges.\

Example:

PVS. Uday Kiran - 21BAI1718 (Chennai)
L. Mohith - 21BAI1470 (Chennai)

WHO are we empathizing with?
Who is the person we want to understand?
What is the situation they are in?
What is their role in the situation?

We are trying to understand whether a person is going to be affected by Diabetes or not.

The role is that they are the subjects of the problem.

Are there any symptoms of Diabetes.

GOAL

They have to deal with their health issues.

What do they need to DO?
What do they need to do differently?
What job(s) do they want or need to get done?
What decision(s) do they need to make?
How will we know they were successful?

They have to make decisions so that they can prevent getting diabetes.

At the end, there should be no symptoms of diabetes.

They will try to adjust food in immediate environments.

What do they HEAR?
What are they hearing others say?
What are they hearing from friends?
What are they hearing from colleagues?
What are they hearing second-hand?

Personal stories or experiences related to living with diabetes or managing the condition.

Conversations about the complexities of data collection, feature engineering, and model validation in the context of diabetes prediction.

News or reports on the latest trends and statistics related to the prevalence of diabetes globally and its impact on public health

What do they THINK and FEEL?

PAINS
What are their fears, frustrations, and anxieties?

Their main fear is about the levels of diabetes, and their frustrations and anxieties are about the food they take.

GAINS
What are their wants, needs, hopes, and dreams?

They need a proper diet.

Their hopes are to find a cure or to control their diet.

Every person's dream is about the cure for diabetes.

What other thoughts and feelings might influence their behavior?

They will change their diet or the exercises they do; maybe they will add some more food items to their diet and exercise.

They used to check whether there was sugar content in food items or not.

They used to talk about their diets, exercises, etc.

They watch and read about the diet they have to take.

What do they SEE?
What do they see in the marketplace?
What do they see in their immediate environment?
What do they see others saying and doing?
What are they watching and reading?

What do they SAY?
What have we heard them say?
What can we imagine them saying?

They used to talk about their exercises and their diet.

Is there any other way to control their diet?

They do exercises; they will go for a walk or cycle, etc.

They are particular about the things they do.

We can imagine that they are strict about their diet, etc.

What do they DO?
What do they do today?
What behavior have we observed?
What can we imagine them doing?
